PROFESSIONAL PROFILE

Computer Science graduate (IBA Karachi, 2026) with SOC internship experience in Microsoft Sentinel (KQL, Logic Apps playbooks) at Systems Ltd, and hands-on cloud and DevOps work: containerised services on Oracle Cloud, a self-hosted Ubuntu home lab (Docker, NGINX, iptables, Tailscale), and a Wazuh threat-intelligence platform with a Gemini API assistant, built as my final-year project. Seeking an entry-level Cloud, DevOps or Software Engineering role in Glasgow, Edinburgh or Dublin, or remotely.

EDUCATION

Institute of Business Administration (IBA), Karachi

Karachi, Pakistan

Bachelor of Science in Computer Science (four-year degree) | CGPA: 3.05/4.00

Aug 2022 – Jun 2026

PROFESSIONAL EXPERIENCE

Systems Ltd

Karachi, Pakistan

Information Security Intern (SOC / Cloud Security)

Jun 2025 – Aug 2025

- Triaged Microsoft Sentinel incidents, including reported phishing emails and malware file-hash (IOC) matches, by pivoting on sender, URL and hash entities and documenting true and false positive verdicts for escalation.
- Wrote KQL queries in Microsoft Sentinel to hunt for and investigate suspicious activity across security log tables.
- Built Azure Logic Apps playbooks triggered by Sentinel incidents to automate repetitive incident-response steps.
- Provisioned Azure test environments secured with Azure Disk Encryption and Azure Key Vault, and used them to test data loss prevention (DLP) policies.

TECHNICAL PROJECTS

SIEM Threat Intelligence Pipeline (Final Year Project)

Jun 2026

FastAPI, React, Docker, Wazuh, STIX/TAXII, Gemini API, MITRE ATT&CK

- Wazuh SIEM lacked automated external threat-intelligence enrichment, which slowed analyst triage: built a containerised FastAPI and React platform that ingests STIX indicators from TAXII feeds into Wazuh and enriches alerts automatically.
- Developed a bidirectional correlation engine mapping indicators to 18 tracked MITRE ATT&CK techniques, and integrated a Gemini API assistant that turns enriched alerts into plain-English threat explanations.
- Result: analysts get enriched, ATT&CK-mapped context and a plain-language summary on each alert, instead of looking up indicators separately.

Self-Hosted Oracle Cloud Server for 24/7 Automation

Jul 2026 – Sep 2026

Oracle Cloud (OCI), Docker, n8n, NGINX, iptables, Tailscale

- Needed an always-on, zero-cost host for a personal automation service: built an event-triggered n8n workflow on an OCI Always Free VM that pulls financial records from Notion, generates charts locally and writes them back.
- Set up remote administration over a Tailscale private network, so no domain or public HTTPS endpoint is needed, and placed Docker containers behind an NGINX reverse proxy with custom iptables rules.

- Result: a continuously available automation service with no recurring hosting cost.

Home Lab: Self-Hosted Services & SIEM

Jun 2025 – Present

Ubuntu Server, Docker, Wazuh, Pi-hole, Immich, Jellyfin, Twingate, Tailscale

- Rebuilt a retired laptop as a headless Ubuntu server hosting internal Docker services, with remote access through Tailscale instead of public exposure, reducing the risk of intrusion to 0% while still retaining accessibility.
- Deployed Wazuh SIEM to centralise security logs and monitor connected devices, ran Pi-hole as a network-wide DNS sinkhole, and configured custom routing for low-latency LAN game servers.
- Self-hosted Immich (photo backup) and Jellyfin (media streaming), resulting in Google Photos and Netflix subscriptions cost to \$0.

Legacy Hardware Optimisation via BIOS Modding

Mar 2025

UEFITool, UEFI firmware

- Patched and flashed a modified UEFI firmware image to enable Resizable BAR on an unsupported Intel i7-3770 and AMD RX 6600 system, unlocking modern PCIe memory access on 2012-era hardware.
- 5% to 10% improved performance in GPU heavy tasks

Hyperion (Custom Linux Hardware Monitor)

September 2026 - Present

Rust, Shell, Arch, Debian

- Developed a custom, themed hardware monitoring tool serving as a Linux alternative to MSI Afterburner, featuring sudo-level integration for accurate SATA and CPU temperature readings.
- Engineered in Rust to maximize security and minimize system overhead, achieving a 45% reduction in CPU usage compared to Ubuntu's native hardware monitor.

TECHNICAL SKILLS

Cloud: Microsoft Azure (Microsoft Sentinel, Logic Apps, Key Vault, Azure Disk Encryption), Oracle Cloud Infrastructure (OCI), AWS

Security: Microsoft Sentinel, KQL, Wazuh SIEM, MITRE ATT&CK, STIX/TAXII threat intelligence, phishing and malware triage, DLP

DevOps & Infrastructure: Docker, NGINX, iptables, Linux (Ubuntu Server), Tailscale, Twingate, Pi-hole, Git

AI & Automation: Gemini API integration, n8n workflow automation, Claude Code, Gemini CLI, Antigravity

Languages & Frameworks: Python, SQL, JavaScript, Java, C++, FastAPI, React, REST APIs

COURSES

- NVIDIA — Accelerated Computing with CUDA C++ and Python
- Boot.dev — Learn Python, Learn Git, Learn Docker

ADDITIONAL INFORMATION

Languages: English, Urdu

Interests: Linux systems, home-lab infrastructure, system design, problem solving
