Professional Summary

Computer Science graduate (IBA Karachi, 2026) with hands-on SOC experience in Microsoft Sentinel: KQL queries, Azure Logic Apps playbooks, and phishing and malware triage at Systems Ltd. Built a Wazuh SIEM threat-intelligence platform using STIX/TAXII feeds and MITRE ATT&CK mapping as my final-year project. Based in Karachi, available to join immediately for on-site, hybrid or remote roles.

Education

Institute of Business Administration (IBA), Karachi

Bachelor of Science in Computer Science | CGPA: 3.05/4.00

Aug 2022 – Jun 2026

Karachi, Pakistan

Experience

Systems Ltd

Jun 2025 – Aug 2025

Information Security Intern (SOC, Microsoft Azure)

Karachi, Pakistan

- Triaged Microsoft Sentinel incidents, including reported phishing emails and malware file-hash (IOC) matches, by pivoting on sender, URL and hash entities and documenting true and false positive verdicts for escalation.
- Wrote KQL queries in Microsoft Sentinel to hunt for and investigate suspicious activity across security log tables.
- Built Azure Logic Apps playbooks triggered by Sentinel incidents to automate repetitive incident-response steps.
- Provisioned Azure test environments secured with Azure Disk Encryption and Azure Key Vault, and used them to test data loss prevention (DLP) policies.

Projects

FYP: Wazuh Threat Intelligence Integration | *FastAPI, React, Docker, STIX/TAXII, Gemini API* **Jun 2026**

- Built a containerized FastAPI and React platform that ingests STIX threat indicators from TAXII feeds into the Wazuh SIEM to enrich security alerts automatically.
- Developed a bidirectional MITRE ATT&CK correlation engine that maps indicators to 18 tracked adversary techniques, so analysts can pivot from an alert to its technique and from a technique to related indicators.
- Integrated a Gemini API analyst assistant that turns enriched Wazuh alerts into plain-English threat summaries to speed up SOC triage.

24/7 Automation Server on Oracle Cloud | *Oracle Cloud Infrastructure, Docker, n8n, NGINX, Tailscale* **Jul 2026**

- Automated an event-triggered n8n workflow on an OCI Always Free VM that pulls financial records from a Notion database, generates charts locally and writes them back to Notion.
- Set up remote administration over a Tailscale private network, removing the need for a public domain or TLS certificates and keeping running costs at \$0.
- Placed Docker containers behind an NGINX reverse proxy with custom iptables rules so internal services are not directly exposed.

Home Lab | *Ubuntu Server, Docker, Pi-hole, Twingate, Tailscale, Immich, Jellyfin*

Jun 2025 – Present

- Rebuilt a retired laptop as a headless Ubuntu Server host for self-hosted Docker services, with remote administration through Twingate zero-trust access and Tailscale.
- Ran Pi-hole as a network-wide DNS sinkhole to block ad and malicious domains, and configured custom routing for low-latency LAN game servers.
- Self-hosted Immich (photo backup) and Jellyfin (media streaming), replacing paid Google Photos and Netflix subscriptions.

Hyperion, a custom Linux hardware monitoring tools | *Rust, Shell commands, Arch, Debian*

Sept 2026

- Created a custom, themed, hardware monitoring tool for people who are tech savvy enough and upon switching to linux, couldn't find a suitable replacement to MSI afterburner (install with sudo for sata and cpu temps)
- Written in Rust, for security and little overhead (45% CPU less than Ubuntu's own hardware monitor)

Technical Skills

Security / SOC: Microsoft Sentinel (formerly Azure Sentinel), KQL, Wazuh SIEM, MITRE ATT&CK, STIX/TAXII, phishing and malware triage, DLP

Cloud: Microsoft Azure (Microsoft Sentinel, Logic Apps, Key Vault, Azure Disk Encryption), Oracle Cloud Infrastructure (OCI), AWS

Networking: DNS (Pi-hole), VPN and zero-trust access (Tailscale, Twingate), iptables, reverse proxies

DevOps / Infrastructure: Docker, NGINX, Git, GitHub, n8n, Linux (Ubuntu Server)

Programming Languages: Python, SQL, JavaScript, Java, C++

Frameworks / APIs: FastAPI, React, REST APIs, Gemini API

Certifications & Training

NVIDIA: Accelerated Computing with CUDA C++ and Python (course completion)

Boot.dev: Learn Python, Learn Git, Learn Docker (course completions)
