PROFESSIONAL SUMMARY

Computer Science graduate (IBA Karachi, 2026) focused on cloud and DevOps, with SOC experience in Microsoft Sentinel (KQL, Logic Apps playbooks) from an internship at Systems Ltd. Runs containerized services on Oracle Cloud and a self-hosted Ubuntu homelab (Docker, NGINX, iptables, Tailscale), and built a Wazuh threat-intelligence platform as a final-year project. Seeking a remote Cloud/DevOps or Cloud Security role with US business-hours overlap.

EDUCATION

Institute of Business Administration (IBA), Karachi

Karachi, Pakistan

Bachelor of Science in Computer Science | CGPA: 3.05/4.00

August 2022 – June 2026

TECHNICAL SKILLS

Cloud: Microsoft Azure (Microsoft Sentinel, Logic Apps, Key Vault, Azure Disk Encryption), Oracle Cloud Infrastructure (OCI), AWS

Security: Microsoft Sentinel, KQL, Wazuh SIEM, MITRE ATT&CK, STIX/TAXII threat intelligence, phishing and malware triage, DLP

DevOps & Infrastructure: Docker, NGINX, iptables, Linux (Ubuntu Server), Tailscale, Twingate, Pi-hole, n8n workflow automation, Git

Languages & Frameworks: Python, SQL, JavaScript, Java, C++, FastAPI, React, REST APIs

AI Tools: Claude Code, Gemini CLI, Antigravity

PROFESSIONAL EXPERIENCE

Systems Ltd

Karachi, Pakistan

Information Security Intern (SOC / Cloud Security)

June 2025 – August 2025

- Triaged Microsoft Sentinel incidents, including reported phishing emails and malware file-hash (IOC) matches, by pivoting on sender, URL and hash entities and documenting true and false positive verdicts for escalation.
- Wrote KQL queries in Microsoft Sentinel to hunt for and investigate suspicious activity across security log tables.
- Built Azure Logic Apps playbooks triggered by Sentinel incidents to automate repetitive incident-response steps.
- Provisioned Azure test environments secured with Azure Disk Encryption and Azure Key Vault, and used them to test data loss prevention (DLP) policies.

PROJECTS

Self-Hosted Oracle Cloud Server for 24/7 Automation

June 2026 – September 2026

Oracle Cloud (OCI), Docker, n8n, NGINX, iptables, Tailscale

- Automated an event-triggered n8n workflow on an OCI Always Free VM that pulls financial records from a Notion database, generates charts locally and writes them back to Notion, at \$0 hosting cost.
- Configured Docker containers behind an NGINX reverse proxy with custom iptables rules so internal services are not directly exposed.

SIEM Threat Intelligence Pipeline (Final Year Project)

November 2025 – June 2026

FastAPI, React, Docker, Wazuh, STIX/TAXII, Gemini API, MITRE ATT&CK

- Built a containerized FastAPI and React platform that ingests STIX threat indicators from TAXII feeds into Wazuh SIEM to enrich security alerts automatically.
- Developed a bidirectional correlation engine mapping indicators to 18 tracked MITRE ATT&CK techniques, letting analysts pivot between alerts, techniques and related indicators.

Home Lab: Self-Hosted Services & SIEM

June 2025 – Present

Ubuntu Server, Docker, Wazuh, Pi-hole, Immich, Jellyfin, Tailscale

- Repurposed a retired laptop as a headless Ubuntu server hosting multiple Docker services, with remote administration via Tailscale.
- Deployed Wazuh SIEM to centralize security logs, and ran Pi-hole as a network-wide DNS sinkhole for ad and malware domains. Self-hosted Immich (photo backup) and Jellyfin (media streaming), resulting in Google Photos and Netflix subscriptions cost to \$0.

Hyperion (Custom Linux Hardware Monitor)

September 2026 - Present

Rust, Shell, Arch, Debian

- Developed a custom, themed hardware monitoring tool serving as a Linux alternative to MSI Afterburner, featuring sudo-level integration for accurate SATA and CPU temperature readings.
- Engineered in Rust to maximize security and minimize system overhead, achieving a 45% reduction in CPU usage compared to Ubuntu's native hardware monitor.

COURSES

- NVIDIA — Accelerated Computing with CUDA C++ and Python
- Boot.dev — Learn Python, Learn Git, Learn Docker
